Situation Awareness Brief

**Wednesday, October 10th 2018
As of 0900 CST**

Tropical Weather Awareness

At 700 AM CDT (1200 UTC), the eye of Hurricane Michael was located near latitude 29.0 North, longitude 86.3 West. Michael is moving toward the north near 13 mph (20 km/h). On the forecast track, the eye of Michael is expected to move ashore over the Florida Panhandle later today, move northeastward across the southeastern United States tonight and Thursday, and then move off the Mid-Atlantic coast away from the United States on Friday. Reports from an Air Force Reserve Hurricane Hunter aircraft indicate that maximum sustained winds have increased to near 145 mph (230 km/h) with higher gusts. Michael is an extremely dangerous category 4 hurricane on the Saffir-Simpson Hurricane Wind Scale. Some additional strengthening is possible before landfall. After landfall, Michael should weaken as it crosses the southeastern United States.

Hazardous Weather

Saturday Rain Chances

Remnants of Sergio Likely to Bring Additional Rain

Weather Forecast Office

Amarillo, TX

Issued Oct 10, 2018 4:09 AM CDT

The remnants of Tropical Storm Sergio will likely bring another round of rain to parts of the Panhandles. Some areas could experience flooding given the wet ground from last weekend's rainfall.
